FOR IMMEDIATE RELEASE

**EXCEL TELECOMMUNICATIONS SELECTS VIXXI SOLUTIONS
TO PROVIDE E911 VOIP SERVICE**

Leading Telecom Firm Enhances Service for Commercial SIP Trunking Customers

IRVING, Texas - February 18, 2008. Excel Telecommunications has selected VIXXI Solutions, Inc., the premier E911 VoIP service provider, to provide VIXXI-Link™, a next generation voice over IP (Internet Protocol) E911 network that provides reliable, secure E911 routing, to help drive lower operating costs and provide advanced services throughout the U.S.

"VIXXI's E911 solution provides Excel with an ideal partner for serving our commercial SIP Trunking customers," stated Steve Weltner, Director of Product Development for Excel Telecommunications. "VIXXI-Link enables our commercial SIP Trunking subscribers to make E911 calls using any U.S. DID and map each DID to a registered physical address, regardless of whether the DID is traditionally linked to the particular PSAP associated with the registered address."

"The combination of Excel's carrier-class SIP Trunking bundled service with VIXXI's comprehensive E911 routing helps deliver on the promise of VoIP," said Mr. Weltner. "Now Excel's commercial SIP Trunking customers can enjoy the cost benefits of VoIP with the flexibility of provisioning any telephone number at any physical location."

VIXXI-Link™ includes a web portal for end-user registration, total ALI management with MSAG validation and ERDB functions, and emergency call routing. It is utilized for expanding CLECs and VoIP service providers, or to convert traditional ILECs' platforms to IP-based switching infrastructures, avoiding the costs of E911 hookup under the old business models while accommodating new technology subscribers. VIXXI-Link™ exceeds suggested standards established by NENA's NG911 Committee and the IP-Enabled Voice Communications and Public Safety Act of 2007.

"We are very pleased to have a top-tier company such as Excel select VIXXI-Link as their preferred solution," stated Richard A. Peters, president of VIXXI Solutions, Inc. "This will allow Excel's customers to receive E911 services in a very short timeframe."

About Excel Telecommunications

Excel is a leading provider of SIP trunking services for small to medium sized businesses. Excel has deployed a near ubiquitous VoIP network in the United States. Excel's SIP trunking portfolio is strategically designed to address evolving IP PBX customer requirements. Excel's SIP trunking service provides partners with excellent features such as virtual voice paths and advance rerouting enabling unified communications.
