**VIXXI's Dynamic Geospatial Routing Addresses the Limitations of Legacy 911 Architecture**  
*Older Selective Routers Do Not Measure Up to VIXXI's Patent-Pending Call Routing Technology*

GREENWOOD VILLAGE, Colo., May 18, 2009 – VIXXI Solutions, the leading-edge E911 provider, has developed an innovative call routing technology that excels over legacy infrastructure in accuracy, reliability, and resiliency. The technology, called Dynamic Geospatial Routing, addresses the limitations of traditional selective router architecture.

Systemic issues with selective routers can create lag times in information updates from the distinct databases upon which they rely. In order for a 911 call to be correctly routed, all key variables, including caller and PSAP location, must be in synch. With PSAP boundaries changing as much as 20% a year, and the newer 911 challenges of mobile communication, calls can be misrouted to the wrong PSAP, sacrificing valuable time.

VIXXI's Dynamic Geospatial Routing was purpose-built to reduce these problems by integrating all critical variables, including the latest and most accurate geocoded location information, at the time of the call. Based on this data, the correct call route is calculated in real-time, as opposed to the pre-determined and potentially outdated caller-to-PSAP relationship tables manually maintained in legacy selective routers.

In addition to increasing the effectiveness of today's 911 system, Dynamic Geospatial Routing meets the Next Generation 911 vision of real-time, location-based call delivery. VIXXI's patent-pending technology is a standard feature of their VIXXI-Link service offering and available today. For more information, please contact VIXXI at 866.970.6855 or [info@vixxisolutions.com](mailto:info@vixxisolutions.com).

**About VIXXI Solutions, Inc.**

VIXXI Solutions is the leading-edge nationwide E911 provider covering the end-to-end architecture of emergency communications with patent-pending, IP-based technology. Offering customized solutions for legacy and next generation environments, VIXXI seamlessly supports wireline, wireless, VoIP, and telematics on a single platform, quickly driving cost savings for customers and increasing the effectiveness of the nation's public safety system.
